BRAND NEW HEATING BENCH

## CÓMODO (*esp.*) MEANS COMFORTABLE

During the design process of our new bench type convector heater **COMODO**, we wanted it to be comfortable, solid and modern good looking. But first and foremost we put the best energy efficiency in the marketplace ever onto our wish-list. So, primarily we have modified our heating coil in order to make it even more energy efficient and offering by consequence optimisation of the heating system overall running cost. Having this sorted out we decided to close 'the beast' within exceptionally elegant casing. This is the whole story behind the designing of a heating bench **COMODO**.

From comfort with love ❤️

## FULL GLAZED FINISH

**COMODO** - our new heating bench appears as looking very noble. The side walls we have finished by full polished glazed cover. The glass we used for this is super save tempered one and there are two basic colours available – deep deep black or gentle, mild white. Why shouldn't you also consider making those glazed surfaces as the advertising space, while it could display your logo or light advert just on the sides of your new bench convector heater. It's your choice ❤️

## REAL OAK WOOD

Oak is considered as exceptionally strong, long-living and imposing tree. It was the primary reason for selecting this specific kind of wood to cover our new **COMODO** bench type convectors as a top end seat. The three massive oak wood boards that are used as the top end of the sitting, are considered as exceptionally scratch and other mechanical damage resistant product. Those boards are looking especially nice composing with their delicate graining that is being protected the same as the whole board surface by the special transparent coating, in order to protect and keep the same good format of those boards during many years of a usage

BRAND NEW HEATING BENCH

## PRODUCT FEATURES:

- fire safety class: A1
- no harmless fumes from any of raw materials nor cotes
- maximum allowed working pressure: 1.0 MPa
- pressure test: 1.3 MPa
- ordinal heat output for the installation water parameters 75/65/20°C,  $\Delta T=50$
- maximum operational temperature: 95°C

Length [mm]	1062	1562
Heat output [W]	1381	2243
Water capacity [dm <sup>3</sup> ]	1,25	1,86
Product order code	CMV5-45/42/106	CMV5-45/42/156
